

Security Solutions Emergency Response Plan

Implementing an emergency response plan (ERP) enables a timely response to an emergency event, with the objective of protecting people and property and satisfying stakeholder expectations. Firestorm® will prepare a custom emergency response plan (ERP) for the site that will meet and, in most cases, exceed any applicable state laws or licensing regulations.

The Emergency Response Plan will:

Identify internal **emergency response personnel**

Document roles and responsibilities for internal emergency response personnel

Develop response procedures that align to the emergency response objectives and assumptions for evacuation, shelter-in-place, lockdown, and lockout

Establish detailed response protocols for a variety of emergencies or critical incidents, such as fire, natural disasters, and medical emergencies

Include forms that can be used to **document suspicious activity, the dates of drills or exercises, and reunification activities**

Designate alerts and notification protocols to internal and external resources/stakeholders to be utilized during each emergency or critical incident

Communications

Evacuation

Shelter

Lockdown

Lockout

Medical

In addition, Firestorm will establish and make contact with off-site evacuation locations suitable for the site. The plan will include routes to identified relocation sites. The plan will not include detailed floor plans.

Firestorm will deliver one hardcopy of the plan along with quick reference flip charts for each classroom and office. In addition, Firestorm will provide one electronic copy, as well as a flash drive containing the ERP that can be used to store critical emergency contact information, medical treatment and transportation authorizations, and other critical documents and information.

Each ERP is reviewed by a former or retired U.S. Secret Service Agent with decades of experience developing and implementing emergency response procedures.

About Security Solutions

The Firestorm Security Solutions team is comprised of highly trained, former US Secret Service Agents empowered to assist all staff, design customized plans and respond to critical incidents for your organization. Firestorm Security Solutions can integrate with the organization's crisis solutions and provide support services.
